

Supplemental  
STATISTICS  
OF INCOME **1966**

# zip code area data

## INDIVIDUAL INCOME TAX RETURNS

Department of the Treasury  
**Internal Revenue Service**

In this supplemental report to the Statistics of Income series, data are shown for the first time for Zip Code areas. Number of returns, number of exemptions, and amounts of income and tax, classified by three broad income classes, are presented for each sectional center and zoned city in the Zip Code system.

Publication 649 (6-69)  
Price \$1.00 (paper cover)

Statistics of Income publications are for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402

Alfred J. McKeon, Chief, Mathematical Statistics Branch

Robert J. Tolliver, Chief, Program Management Branch

This report was prepared in the Income, Finance, and Wealth Branch under the direction of Jack Blacksin, Chief, Individual Income Statistics Staff, and Keith Gilmour, Chief, Wealth Statistics Staff. Important contributions were made by Peter Sailer.

The statistics in this report are based on the IRS Master File of all individual income tax returns for tax year 1966. Processing of returns for the Master File was performed at the seven IRS service centers at Andover, Massachusetts; Austin, Texas; Chamblee, Georgia; Cincinnati, Ohio; Kansas City, Missouri; Philadelphia, Pennsylvania; and Ogden, Utah.

Return records were extracted from the Master File at the IRS National Computer Center in Martinsburg, West Virginia. Further computer processing and table production were performed at the IRS Data Center in Detroit, Michigan.

Technical assistance was provided by Richard Jones, Customer Relations Officer, U.S. Post Office Department.

# Letter of Transmittal

Treasury Department,  
Office of the Commissioner of Internal Revenue,  
*Washington, D. C., April 29, 1969.*

Dear Mr. Secretary:

I am transmitting the *Supplemental Report, Statistics of Income--1966, Zip Code Area Data from Individual Income Tax Returns*, prepared in partial fulfillment of the requirements of section 6108 of the Internal Revenue Code. This report contains heretofore unpublished statistics related to the operation of our tax system in small geographic areas throughout the country.

The present report was prepared in response to the increasing demand for small area data by users of *Statistics of Income*. Previously, this demand could not be met because of the limitations of the relatively small number of returns in the sample used for the annual *Statistics of Income* reports. However, with the expansion of the Internal Revenue Service's Master File for 1966 to cover all taxpayers, it became possible for the first time to obtain income and tax data from all individual income tax returns and to classify them into small geographic units. The taxpayer's Zip Code, which was included in the Master File, was used as the means of classifying the data into postal sectional centers and zoned cities. This report marks the first time in the Federal Government that the postal Zip Code has been used as a means of geographic classification in publishing financial statistics for small areas.

*Commissioner of Internal Revenue.*

Hon. David M. Kennedy,  
*Secretary of the Treasury.*

# Introduction

Zip Codes, first introduced by the U. S. Post Office Department in 1963, have been gaining increased acceptance as a logical system for subdividing the country into small areas for the purpose of economic studies, especially for market analysis. Since a Zip Code was included as a part of every taxpayer's return record, it presented a unique opportunity to produce small area data from individual income tax returns.

In producing data for such small areas, the sample of returns used in producing the annual *Statistics of Income* reports would have been inadequate. With the completion of the Internal Revenue Service Master File of all individual income tax returns for tax year 1966, an alternative source of tax data became available, and relatively precise measures of small area data became possible for the first time. However, it should be noted that the definitions and procedures used in Master File processing, and thus reflected in this report, differ in some particulars from those generally used in IRS statistical processing.

In this volume, data are shown for all 3-digit Zip Code areas in the United States, as defined by the Post Office Department. These 837 areas<sup>1</sup>, identified by the first three digits of the Zip Code, are the basic subdivisions below the State level in the postal system. Each has a central (or "hub") post office, in which the mail is sorted for distribution to the surrounding post offices, branches, or stations, which are in turn identified by the last two digits of the Zip Code.

Since these areas were set up to facilitate the movement of mail, they tend to reflect the transportation patterns, and thus the patterns of commerce, in a given region. For this reason, they have been found to represent meaningful economic areas, which can be used to approximate marketing or commuting areas. As a rule, they do not reflect previously established political boundaries, such as county or city lines.

The 3-digit Zip Code areas are of two basic types: sectional centers and zoned cities. Sectional centers consist of a "hub" city and surrounding smaller towns and rural areas. In the case of zoned cities, on the other hand, a 3-digit code simply identifies one large city (although it should be noted that the boundaries of the zoned city do not necessarily conform to those of the corresponding political unit).

A slight variation of these two basic types of 3-digit areas occurs when the hub city of a sectional center is also a zoned city. In these cases, the sectional center

assumes the shape of a ring around the hub city, while the latter is identified by a separate 3-digit code.

For further details on the Zip Code system, see the "Explanation of Classifications and Terms" (appendix A).

## ORGANIZATION OF THIS REPORT

Data for each of the 837 3-digit Zip Code areas are shown in Zip Code numeric sequence in the basic tables. For further convenience, the tables have been arranged into 10 sections, each representing one of the Post Office Department's National service areas. National service areas are identified by the first digit of every Zip Code.

The National totals for these data are shown on the first page of the basic tabulations. Preceding every section of tables is a set of maps for each of the States in that particular National service area. These maps show the approximate boundaries of the sectional centers and the location of the zoned cities.<sup>2</sup> State totals, which include data for a few returns which could not be classified by Zip Code, precede the Zip Code data for each State.

Some of the limitations of the geographic classifications used in this report are explained in appendix B.

## RELATIONSHIP TO OTHER REPORTS

In contrast to other reports in the *Statistics of Income* series, this supplemental report is not based on a sample, but on the complete Master File of individual income tax returns for 1966. Therefore, unlike the other *Statistics of Income* reports, data in this report are not subject to sampling variability.

Although there are some differences between State totals as shown in this report and State totals in the regular *Statistics of Income* report for 1966, the difference in U. S. totals is less than 1 percent with respect to number of returns, adjusted gross income, and total tax.

In most cases, the differences are due to the differing methods applicable to Master File revenue processing operations and to regular *Statistics of Income* processing. In addition, the definitions of adjusted gross income, taxpayers' exemptions, and tax used in this report differ somewhat from those used in the regular *Statistics of Income* program, as is explained in appendix C.

<sup>1</sup>There are 552 basic areas ("sectional centers") in the Zip Code system. However, some of these areas are further subdivided into two or more portions, each identified by a unique 3-digit code.

<sup>2</sup>For more detailed information on the configuration of Zip Code areas, contact the Customer Relations Division, U. S. Post Office Department, Washington, D. C. 20260.

## Basic Tables

# National Service Areas

NOTE: The basic tables are arranged by National Service Area—the ten basic subdivisions of the Zip Code system (identified by the first digit of the Zip Code). The States comprising each National Service Area are shown in the map below.

# Explanation of Classifications and Terms

## **CLASSIFICATIONS**

### **States**

Each return in the Internal Revenue Service Master File is assigned a "current location district code," which identifies the IRS district office serving the place of residence indicated by the taxpayer. This code was the basis for the State classifications in this report. Internal Revenue districts, or groups of districts, are identical with State boundaries, except for the District of Columbia which is part of the Baltimore, Maryland, Internal Revenue District. Washington, D. C., is therefore combined with Maryland in these tabulations.

### **Zip Code Areas**

The Zip Code is a five-digit code developed by the Post Office Department to facilitate the distribution of mail. The first digit of each Zip Code identifies one of ten National service areas, each consisting of from three to seven States. The second digit identifies a State, a portion of a large State, or two small States. The third digit identifies a portion of a State, known as a sectional center or zoned city, while the fourth and fifth digits pinpoint an individual post office facility and the area it serves.

In this report, tabulations are shown for each three-digit area. These are of two types: sectional centers and zoned cities.

### **Sectional centers**

A sectional center consists of a hub-city and surrounding towns and rural areas. The mail is sorted in the hub-city post office for distribution to post offices in surrounding towns. Hub-cities, therefore, are chosen in such a way as to be the natural transportation centers for the sectional centers. The most distant post office served is to be no more than two to three hours driving time away from the hub city.

Since sectional centers were designed in such a way as to reflect transportation patterns, they have been found to be economically significant subdivisions. For instance, they are often useful to approximate marketing or commuting areas. They do not generally conform to the boundaries of any previously established subdivisions, such as counties, except that they rarely cross State lines.

Sectional centers are identified by the name of the hub-city. Thus, "077 Red Bank" designates an area consisting of Red Bank, New Jersey and surrounding towns. Sometimes, a sectional center is identified by more than one

3-digit code. For instance, prefix 210 identifies towns around Baltimore, Maryland, beginning with letters A through L, while prefix 211 identifies towns in the Baltimore sectional center whose names begin with M through Z. Since neither 210 nor 211 identifies one contiguous area, they have been combined in these tabulations.

There are also cases where more than one 3-digit code applies to a sectional center and each 3-digit code represents a contiguous area by itself. Thus, the prefix 301 represents towns to the north of Atlanta, Georgia, 302 towns to the south of Atlanta. These areas are shown separately in the tables and designated as "301 Atlanta (North)" and "302 Atlanta (South)", respectively.

As mentioned previously, sectional centers do not cross State boundaries. There are some cases where a city in one State serves as the natural transportation center for a portion of another State. Thus, it is not unusual for a sectional center to have a hub-city which lies in a different State. However, whenever one hub-city serves two States, the sectional centers in each of the States are given separate numbers. Thus, Charlotte, North Carolina, serves as hub-city for sectional center 280-281 (entirely within North Carolina) and sectional center 297 (entirely within South Carolina). The latter sectional center is designated "297 Charlotte, North Carolina (South Carolina offices)" in the basic tables, and is shown as part of the South Carolina tabulation.

### **Zoned cities**

In addition to the sectional centers, some 3-digit codes represent simply a city by itself. This is true of approximately 200 of the largest cities in the country, which have been designated as "zoned cities"--i.e., they have been divided up into individual mail delivery areas (zones), each served by its own post office facility.

It should be noted that the boundaries of the zoned cities, as identified by the Post Office Department, are not always identical with the cities' political boundaries. As in the case of sectional centers, the boundaries of the zoned cities were chosen to reflect economic, not political realities. Thus, the zoned city of Baltimore (prefix 212) includes those portions of Anne Arundel, Baltimore, and Howard counties which are economically integrated with the city.

Some zoned cities also serve as hub-cities for sectional centers. As a result, many sectional centers assume the shapes of rings surrounding these large cities. For instance, the 3-digit code 441 represents the zoned city of Cleveland, Ohio; the code 440 represents the surrounding towns and rural areas (i.e. the sectional center).

The zoned cities and sectional centers of Atlanta, Georgia; Pittsburgh, Pennsylvania; and Spokane, Washington present a further variation on this principle. There is one code (in the case of Spokane, it is 992) that represents the central city; a second code (990) represents the "metro," the immediately surrounding area; a third code (991) represents the sectional center, the area surrounding the metro.

New York City is a special case in that it is represented by a total of eight prefixes. The boroughs of Manhattan, Richmond, the Bronx, and Brooklyn are represented by Zip Code prefixes 100, 103, 104, and 112, respectively; Zip Code areas 111, 113, 114, and 116 are in the borough of Queens.

In the tables, wherever a 3-digit code represents a city or a metro, it is so designated. Thus, the heading "152 Pittsburgh (City)" designates the zoned city of Pittsburgh; "151 Pittsburgh (Metro)\*" applies to the close-in suburbs; and "150 Pittsburgh\*\*" designates the surrounding sectional center. Whenever an asterisk is shown following the name of an area, it indicates that this is a "surrounding area;" the hub-city after which the area is named is not included.

Limitations of the Zip Code classifications are explained in appendix B.

#### Adjusted Gross Income Classes

The amount of adjusted gross income reported by the taxpayer on his return was the basis for classifying data for the size of income. Returns with deficit and returns on which income equalled loss were included in the "Under \$3,000" class. However, amounts of deficit shown on these returns were not subtracted from adjusted gross income. (See definition of adjusted gross income, below).

#### EXPLANATION OF TERMS

##### Number of Returns

Number of returns included tax returns (Forms 1040 and 1040A) filed by individual income taxpayers (regardless of marital status) during calendar year 1967. Most of these returns were for tax year 1966 and were filed by taxpayers with calendar year accounting periods. A small number of prior year delinquent and noncalendar year returns was also included. In the few instances where the same taxpayer might have filed multiple returns during 1967, however, he was only counted once.

##### Number of Joint Returns

Number of joint returns included those returns on which a married couple reported their combined income, or those returns of married couples where only one spouse had income but exemptions for both were claimed. Generally, the filing of a joint return resulted in a tax saving because of "income splitting" automatically provided for in the joint return tax rate schedule. Joint returns were typically filed by what the Census Bureau terms "husband and wife families." However, it should be noted that some "husband and wife families" also filed separate returns.

In Master File processing, returns were not accepted as joint unless the names of both husband and wife were determinable, even if joint status was checked or exemptions were claimed for both spouses. (See appendix C).

#### Number of Exemptions

In the tax computation, a \$600 deduction from adjusted gross income was allowed for each exemption claimed. An exemption was allowed for each taxpayer shown on a return (on joint returns husband and wife were each regarded as a taxpayer) and for each qualified dependent. Additional exemptions were allowed for taxpayers (but not dependents) who were age 65 or over, or blind.

The total number of exemptions shown in this report includes a duplication of exemptions for certain individuals. These individuals were--

(1) dependents who had less than \$600 gross income, but filed a return to obtain a refund of tax withheld on wages, and

(2) dependents under 19 years of age or students who were required to file a return because their gross incomes were \$600 or more.

These individuals were counted twice, as taxpayers filing their own returns and as dependents on another taxpayer's return.

#### Taxpayers' Exemptions

Exemptions of taxpayers included the "personal" exemptions for each taxpayer (including spouse) plus additional exemptions for age and blindness.

In general, each joint return included two personal exemptions, all other returns one personal exemption each. However, two taxpayer exemptions may have been claimed on some separate returns. This was legally permissible if the spouse had no gross income and was not the dependent of another taxpayer.

The additional exemptions for age and blindness were allowed for each taxpayer or spouse who, before the close of the taxable year, was age 65 or over, or legally blind.

#### Dependents' Exemptions

An exemption was allowed for each child (including a stepchild or an adopted child) who was under 19 years of age, or who was a student regardless of age, if the taxpayer furnished more than half the support. If the child was 19 or over and not a student, an exemption was allowed only if the child had less than \$600 gross income for the year and the taxpayer furnished more than half the support.

An exemption of \$600 was also allowed for any dependent who had less than \$600 gross income and who received more than half his support from the taxpayer if the dependent was:

(1) A close relative as outlined in section 152 of the Internal Revenue Code, or

(2) A person who lived in the taxpayer's home for the entire year and was a member of his household whether or not related to the taxpayer.

An exception to the support test for a dependent provided that where the individual was supported by several persons, none of whom contributed more than half of total support, any one of the group who had contributed more than 10 percent could claim the exemption if the others who contributed more than 10 percent agreed not to claim the exemption.

To qualify as a dependent, an individual must have been either a citizen or resident of the United States: a resident of Canada, Mexico, Panama, or the Canal Zone; or an alien child adopted by and living with a United States citizen abroad.

An exemption could be claimed for a dependent who was born or died during the year if the support and other tests were met for the part of the year during which the dependent was alive.

#### Adjusted Gross Income

For many taxpayers whose only source of income was salaries and wages, adjusted gross income was their total income. For others, this amount was the result of reducing total income from all sources subject to tax by deductions such as the following:

- (1) Ordinary and necessary expenses of operating a trade or business,
- (2) Employee business and moving expenses,
- (3) Expense deductions attributable to rents and royalties,

- (4) Expenses for education required to maintain salary, status, or present employment,
- (5) Depreciation and depletion allowed life tenants and income beneficiaries of property held in trust,
- (6) Deductible losses from sales of capital assets and other property,
- (7) Deduction equal to 50 percent of the excess of net long term capital gain over net short term capital loss,
- (8) Net operating loss deduction,
- (9) Contributions to a retirement fund by the self-employed,

Wherever this computation resulted in a negative amount, income for that return was recorded as "0."

#### Total Tax

Total tax was the sum of income tax after credits, self-employment tax due under the Social Security law, and any additional tax liability due to recomputing prior year investment credit.

As the name "income tax after credits" implies, this amount was net of the retirement income credit, the investment credit, the foreign tax credit, and other statutory credits. However, tax withheld and estimated tax payments made during the year were not considered in computing total tax, since they represented prepayments of that tax.

# Sources and Limitations of the Data

## SOURCES OF THE DATA

The data in this report were extracted from the Internal Revenue Service Individual Master File (IMF), which contains records of all tax transactions of individual income taxpayers. All 1966 returns filed were used for the tabulations in this report.

A 1966 return was defined as a Form 1040 or 1040A posted to the IMF during calendar year 1967. Most of these returns did, in fact, cover income received during calendar year 1966. A small number of prior year delinquent and noncalendar year returns were included as well.

A relatively small number of taxpayers filed more than one return during calendar year 1967 (i.e. one regular return plus a prior year delinquent return). In those instances the combined total amounts of income and tax reported during the year were shown in the tabulations. However, the taxpayer was counted only once (i.e. as one return), and exemptions shown corresponded to those reported on the latest return filed (see appendix C).

An individual income tax return was required of (1) every citizen or resident alien under 65 years of age (including minors) who had \$600 or more of gross income for the year,<sup>1</sup> (2) every citizen or resident 65 years or over who had \$1,200 or more gross income for the year, and (3) every person regardless of age or gross income who had self-employment income of \$400 or more during the tax year. Gross income, for purposes of filing, included income earned from sources outside the United States, even if the income was exempt from tax.

Individuals who had tax withheld from wages, but whose income was less than that required for filing, usually filed to obtain a refund of tax withheld, so that in all, about 183 million individuals were covered by the tax system in 1966, as compared to a total population estimated at 197 million by the Bureau of the Census.<sup>2</sup>

<sup>1</sup>Bona fide residents of Puerto Rico also had to file tax returns covering income from sources outside Puerto Rico. However, these returns were not included in the Master File for 1966, and are not reflected in these tabulations.

<sup>2</sup>The IRS figure was obtained by counting two taxpayers for each joint return, one taxpayer each for all other types of returns, and adding the number of dependents' exemptions (total number of exemptions, about 10 million higher, includes additional exemptions for age and blindness). Both figures include armed forces stationed abroad. The Census estimate, it should be noted, is for July 1, 1966, while IRS exemptions include persons who were alive at any time during the taxable year.

Taxpayers had a choice of two return forms for reporting their income for 1966. Form 1040A, the card-form, was available to individuals who had less than \$10,000 adjusted gross income consisting of wages reported on withholding statements (Form W-2) and not more than \$200 of dividends, interest, and wages not subject to income tax withholding. Form 1040 was a two-page form which had supplementary schedules for reporting other sources of income. Both Forms are reproduced in appendix D.

## LIMITATIONS OF THE DATA

The accuracy of the data was affected by taxpayer reporting errors as well as systemic errors introduced in processing the data. However, efforts were made throughout the system to minimize such errors.

A preliminary check on the data was performed by tax examiners prior to keypunching during document perfection. For instance, if the taxpayer forgot to enter on his return total wages shown on his W-2, the tax examiner entered this figure on the return.

After a return record was first keypunched and entered onto a "transaction tape," but before it was posted to the Individual Master File, it was subjected to validity and mathematical verification tests. The validity tests were a series of checks on the consistency of the return records. As examples, if an amount was shown for refund, but none for withholding; if tax withholding was greater than total wages; or if the number of exemptions claimed was inconsistent with the marital status or number of taxpayer names shown; then the return record was considered invalid and was read out for correction. If it could not be corrected, correspondence with the taxpayer was initiated. Once the discrepancy was resolved, the corrected data were entered on the IMF.

Mathematical verification involved a recomputation of tax liability (balance due or refund requested) on the basis of the income, marital status, deduction, and exemption data given by the taxpayer. If the recomputed tax liability differed from that indicated on the return record, the return was read out for correction or to initiate correspondence with the taxpayer.

Any correction made by tax examiners during document perfection or as a result of the validity or mathematical verification tests was reflected in these tabulations.

## SOURCE AND LIMITATIONS OF THE GEOGRAPHIC CLASSIFICATIONS

The primary source of the geographic classifications in this report was the return address given by each taxpayer. The Internal Revenue Service library file of all commonly accepted city-State name combinations was used, whenever possible, to establish the correct Zip Code and IRS district code for the address indicated. Since Internal Revenue districts, or groups of districts, are identical with State boundaries, the Master File district code was used as the basis of State classifications in this report. The Zip Code was, of course, the basis of the sectional center and zoned city classifications.

There were two basic limitations of the geographic classifications. One involved the address reported by the taxpayer; the other the ability of the computer to recognize the address reported.

Taxpayers were supposed to indicate their home address on their returns. The vast majority did. However, some may have given their business address, the address of the assistior who prepared the return, a post office box in a town other than the one they lived in, or no address at all. Geographic classifications had to be based on whatever address was shown on a return. If no address was given, the return was coded for the State in whose district office it was filed. Within that State, it is shown in the statistics as "unallocated" by Zip Code area.

Even if the taxpayer indicated his home address on his return, it might not have been machine-readable for one of the following reasons:

1. The taxpayer had indicated a city-State name combination not recognized by the Post Office Department or not commonly used by mailers, and therefore not recorded on the IRS library tape.
2. He had misspelled the city or used a spelling not generally accepted.
3. He had written the address illegibly.
4. The keypuncher had mispunched the address.

In these circumstances, as in the case where no return address was given, the return was coded for the State in which it was filed. The Zip Code used was that given by the taxpayer, as long as it was one valid for the State of filing. If it was invalid, the return was classified as "unallocated" by Zip Code.

One further source of "unallocated" returns was the APO (Army Post Office) and FPO (Fleet Post Office) addresses. Most service men and women stationed abroad file in California, Washington State, or New York (where the APO and FPO post offices are located), or with the Baltimore District Office (which serves Maryland and Washington, D.C.). For these States, separate totals are shown for the military addresses. However, some returns from APO and FPO addresses were filed in each of the remaining 46 States, and there they were classified as "unallocated" by Zip Code.

# Differences in Statistics:

## Supplemental Compared with Annual Report

Detailed statistics from individual income tax returns are published annually in the report *Statistics of Income, Individual Income Tax Returns*.<sup>1</sup> These reports are based on an especially selected and edited sample of roughly 386,000 returns. A description of the sample and limitations of the data for the regular *Statistics of Income* is shown in section 7 of the 1966 report.

The *Statistics of Income* sample was designed primarily to produce National estimates. Therefore, in producing this supplemental report of small area data, the Internal Revenue Service Master File of all individual income tax returns had to be used. Since the data in the two reports are based on two different files of returns, the National and State totals shown in this supplemental report are not identical with those in the regular *Statistics of Income* report for 1966.

In addition, the data in this report, based on the IRS Master File, reflect the coverage, definitions, processing procedures, and classifications established for revenue processing, which are not necessarily the same as those used in statistical processing. The limitations of data from the Master File are explained in appendix B to this report. The most important differences between the two types of processing systems are as follows.

### COVERAGE

Both the regular report for 1966 and this supplemental report were based on individual income tax returns filed during 1967. However, there were small differences in the handling of certain special types of returns.

**1. Prior year delinquent returns.** In the regular *Statistics of Income* program, these returns were accepted as representing a reasonable estimate of delinquent returns that would eventually be filed for 1966. If the same taxpayer filed two returns during the year--a current year return and a prior year delinquent return--both had a certain probability of being selected for the sample.

In the supplemental report, amounts of income and tax reported on prior year returns were also included in the tabulations. However, if the same taxpayer filed two returns during 1967, he was only counted once, as far as number of returns and exemptions were concerned, but amounts of income and tax on the two returns were combined.

**2. Returns with no information on income and tax.** In the annual report, these returns were included for purposes of establishing the sample weights, but were excluded from the tabulations. These returns were included in the tabulations in supplemental report.

<sup>1</sup>*Statistics of Income—1966, Individual Income Tax Returns* is available at \$2.50 from the U. S. Government Printing Office, Washington, D. C. 20402.

**3. OIO returns.** Comparability of the National totals in the supplemental and annual reports was affected by the inclusion in the regular *Statistics of Income* sample of returns filed with the Office of International Operations (OIO) in Washington, D. C. Most of these returns, filed by certain residents of Puerto Rico and by U. S. citizens living abroad, were excluded from the Master File for 1966, and are not reflected in the tabulations in this report.

### DEFINITIONS

Three of the items shown in this supplemental report were defined somewhat differently from similar items in the annual report.

**1. Taxpayer exemptions.** In this report, taxpayer exemptions include the personal exemption for the taxpayer (taxpayer and spouse on joint returns) as well as additional exemptions allowed for age and blindness. In the annual report, age and blindness exemptions were shown separately from personal exemptions.

**2. Adjusted gross income.** In Master File processing, whenever the computation of adjusted gross income resulted in a negative amount, the return was recorded as having "O" income. In the annual report, on the other hand, amounts of deficit were subtracted from total adjusted gross income.

**3. Income tax.** Total tax, as shown in this report, included amounts of self-employment tax and tax from recomputed prior year investment credit. "Income tax after credits," the measure of tax used in most tables in the annual report, did not include these amounts, which were presented separately.

In table C1 of this appendix, the number of taxpayer exemptions and the amounts of income and tax shown for the regular report have been adjusted to conform to the definitions used in the supplemental report.

### PROCESSING PROCEDURES

Even for items which were defined the same way for both reports, discrepancies may have arisen because of differences in the procedures used for handling returns which were not internally consistent. This difference was particularly apparent in the case of marital status coding.

A joint return, both for the purposes of revenue and statistical processing, was one filed by a husband and a wife, on which both reported their incomes (if both had incomes), and on which both claimed those exemptions to which they were entitled. The names and social security numbers of both spouses were to be given at the top of

such a return, and both spouses were to sign it. The taxpayer was to check a box indicating a joint return.

Problems arose, of course, where the taxpayer did not meet all of these conditions. The statistical editor (i.e. the one editing the sample of returns used in the annual report) coded a return as joint if it most nearly matched the above criteria. The editors in revenue processing, on the other hand (i.e. those editing returns for the Master File, on which this report was based), did not recognize a return as joint unless the names of both taxpayers were given on the return--either at the top or in the signature area--even if other criteria for joint status were met. As a result of these procedural differences, almost 6 percent fewer returns are shown as joint in this supplemental report than in the annual *Statistics of Income* report for 1966, as is shown in table C1.

All other items differ by 1 percent or less in the National totals, with differences not exceeding 2 percent in individual income classes.

#### STATE CLASSIFICATIONS

State classifications in the annual *Statistics of Income* report for 1966 were based on the district code given a return in the district office or regional service center where it was filed. In the supplemental report, on the other hand, State classifications were based on the Individual Master File's current location code which was corrected, wherever possible, to correspond to the tax-

payer's address, regardless of where the return was filed. (See appendix B for details).

Table C2 of this appendix shows that, for most States, there were only minor differences between the data shown in the two files. One exception was Maryland, which had 10 percent fewer returns in the supplemental than in the annual report. The reason may lie in part in the fact that a large number of U. S. servicemen living abroad and Government officials file with the Baltimore District Office. To the extent that they indicated APO and FPO return addresses, they were classified as Maryland taxpayers in both reports. However, if they showed an official address in the United States (other than Maryland or the District of Columbia), they were reclassified for the purpose of the supplemental report, but not in the annual report.

In the case of Florida, the 6 percent difference in number of returns shown could in part be attributed to the maintenance of dual residences. Some Florida taxpayers may have filed returns, bearing Florida addresses, in districts outside Florida where they maintained their other residences.

Since the data in the annual *Statistics of Income* report are based on a sample of returns, those in the supplemental report on all returns, differences between the two series may in part be due to sampling variability in the annual report. Sampling variability may be particularly important in explaining the differences for the smaller States.

Table C1.—NUMBER OF RETURNS, NUMBER OF EXEMPTIONS, ADJUSTED GROSS INCOME, AND TOTAL TAX: COMPARISON OF DATA IN THIS SUPPLEMENTAL REPORT WITH IDENTICAL ITEMS FROM THE 1966 ANNUAL STATISTICS OF INCOME REPORT, BY ADJUSTED GROSS INCOME CLASSES<sup>1</sup>

Adjusted gross income classes	Annual report	Supplemental report		Annual report	Supplemental report		Annual report	Supplemental report		Annual report	Supplemental report

<sup>1</sup>Data in the supplemental report based on the IRS Master File of all individual returns. Data in the annual report based on an especially selected and edited sample of returns.<sup>2</sup>Amounts of deficit not subtracted.<sup>3</sup>Includes data for "other" areas not shown separately below, such as returns with foreign addresses.<sup>4</sup>Includes data for the District of Columbia.

NOTE: The annual report referred to in this table is Statistics of Income—1966, Individual Income Tax Returns.

## Appendix D

# 1966 Tax Forms

In the following facsimiles of individual income tax returns, the items used in this report have been checked.

**1040A U.S. Individual Income Tax Return**

**1966**

U.S. Treasury Department Form Internal Revenue Service  
Please print.

1. Name (If a joint return of husband and wife, use first names and middle initials of both)	2. Your social security number (Husband's if joint return)	4. Check one: <input type="checkbox"/> a. Single; <input type="checkbox"/> b. Married filing joint return (even if only one had income); <input type="checkbox"/> c. Married filing separately if your husband or wife is also filing a return give his or her first name and social security number.
Home address (Number and street or rural route)	3. Wife's number, if joint return	
City, town or post office, State and ZIP code		
Enter the name and address used on your return for 1965. (If the same as above, write "Same.") If none filed, give reason. If changing from separate to joint or joint to separate returns, enter 1965 names and addresses.		
If your income was \$5,000 or more, you must compute your tax. If income was less than \$5,000, you may have the Internal Revenue Service compute your tax by omitting items 8, 10, and 11 (but, complete item 9). If you compute your own tax, pay balance (item 10) in full with return to your District Director.		
Apply refund to: <input type="checkbox"/> U.S. Savings Bonds, & excess refunded; or <input type="checkbox"/> Refund only.		
LIST YOUR EXEMPTIONS AND SIGN ON OTHER SIDE.		
5. Enter total wages, salaries, tips, etc. Enclose Forms W-2, Copy B. If not shown on enclosed Forms W-2 attach explanation.		
6a. Interest Yours ► Wife's ►		
6b. Dividends: Yours—before exclusion \$..... After ► (See inst.) Wife's—before exclusion \$..... After ►		
7. Total Income (add items 5, 6a, and 6b) ►		
8. Tax from Tax Table or tax computation schedule ►		
9. Total Federal income tax withheld (from Forms W-2) ►		
10. If item 8 is larger than item 9, enter Balance due ►		
11. If item 9 is larger than item 8, enter Refund ►		

**12. EXEMPTIONS FOR YOURSELF—AND WIFE (only if all her income is included in this return, or she had no income)**  
Check boxes which apply

13. First names of your dependent children who lived with you	Enter number ►				
14. DEPENDENTS OTHER THAN THOSE CLAIMED IN ITEM 13.					
(a) NAME ► Enter figure 1 in the last column to right for each name listed (if more space is needed, attach schedule)	(b) Relationship	(c) Months lived in your home. If born or died during year also write "B" or "D"	(d) Did dependent have income of \$600 or more?	(e) Amount YOU furnished for dependent's support. If 100% write "ALL"	(f) Amount furnished by OTHERS including dependent. See instruction 14
			\$	\$	
15. TOTAL EXEMPTIONS FROM ITEMS 12, 13, AND 14 ABOVE.					
Your present employer	Wife's present employer				
City and State where employed	City and State where employed				
If you had an expense allowance or charged expenses to your employer, see instructions for "Reimbursed Expenses" and check here <input type="checkbox"/> if appropriate.					
Under penalties of perjury, I declare that to the best of my knowledge and belief this is a true, correct, and complete return. Sign here ►					
If joint return, BOTH HUSBAND AND WIFE MUST SIGN even if only one had income.			Date
